PROFESSIONAL SUMMARY

Motivated Computer Science graduate with strong foundational knowledge in Python, JavaScript, SQL, and web technologies. Experienced in supporting software development lifecycles, writing clean code, and performing structured unit testing for full-stack and database-driven applications. Demonstrates clear technical documentation practices, collaborative problem-solving, and a fast-learning mindset aligned with enterprise digital transformation initiatives.

TECHNICAL SKILLS

Languages: Python, JavaScript, SQL, Dart, HTML5, CSS3

Frontend: React.js, Flutter, Responsive UI/UX Design

Backend : Node.js, Express.js

Database: MongoDB, SQL

Tools & Practices: Git/GitHub, Technical Documentation, Postman, Agile/Bootcamp Team Projects

Testing & QA: Unit Testing, Test Case Execution, Bug Logging, Outcome Verification

PROJECTS

Personal Finance & Expense Management Web Application :

- Architected and deployed **SpendWise**, a responsive personal finance web application, utilizing modern frontend frameworks, secure RESTful APIs, and cloud hosting on Vercel to deliver seamless real-time expense tracking.
- Conducted structured unit testing and API validation using Postman to record outcomes, debug request payloads, and verify data isolation.
- Created detailed technical documentation covering API endpoint parameters, database schema structures, and unit test execution logs.
- Collaborated closely with peer developers to clarify architectural requirements and deliver responsive frontend interfaces using React.js

Transit & Fleet Route Tracking Application :

- Participated in an Agile development team of 4 to design and implement mobile tracking interfaces using Flutter and Dart.
- Assisted in coding core UI components and handling asynchronous data streams for route status updates. Executed functional test runs across multiple device screens, logging unexpected behavioral bugs and documenting resolutions to ensure stability.
- Participated in regular sprint check-ins to communicate task progress, resolve technical queries, and align with overall project milestones.

CERTIFICATIONS & TRAINING

- **Full Stack Development Program (Q-Spiders):** Hands-on training in Python/JavaScript development, database management, and full-stack software lifecycle practices.
- **MERN Stack & Web Application Development (Skill-Bridge):** Applied coding and testing for MongoDB, Express.js, React.js, and Node.js applications.

EDUCATION

B.E. Computer Science and Engineering

Builders Engineering College | CGPA: 7.6

Graduation: May 2025
